

- Cost effective upgrade options for VingCard's Classic, *DAVINCI* and **presidio** locks!

If you are an owner of a VingCard magnetic stripe- or smart card based locking system, it is now easy and cost effective to increase the overall security of your property with an Auto Deadbolt lockcase upgrade.

By simply exchanging the the lockcase and the strikes and re-using all other system and lock components, you can overnight provide your guests and their belongings with an added measure of security through automatic deadbolt projection upon door closure. With a VingCard Auto Deadbolt solution, the door will always be double locked both by the latch and a solid steel reinforced deadbolt irrespectively of whether the guest is in the room or not.

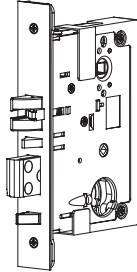

VingCard's auto deadbolt solution is beside offering excellent added security, carefully designed to minimize risk of malfunction from site specific aspects such as inaccurate strike installations and poor frames.

Features

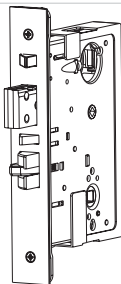

- :: Both latch and deadbolt will lock the door independently from each other. The latch/auxiliary latch and the deadbolt are not dependent on each other for their respective locking functions.
- :: Manual deadbolt override through traditional thumbturn operation. For extra security, the guest will always be able to turn the deadbolt mechanically into position with the thumbturn through the familiar privacy activation.
- :: A "secure deadbolt" function ensures that the deadbolt will not release prematurely before the door is completely closed.
- :: Full compatibility with VingCards unique re-codable mechanical override cylinder option (not available for **presidio**).
