

## SYSTEM OVERVIEW

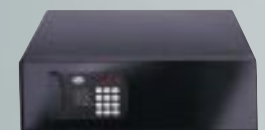

SAFELINK IS FULLY  
COMPATIBLE WITH...

Infinity Collection

Classic S-series

Elsafe M28

Classic C20 and A20

Classic C15 and A15

Classic C05 and A05

### Standard Safelink System

The Safelink safe security management system is supplied complete with everything you need for setting up and maintaining all your Elsafe safes:

- Compaq Palm-sized PC with color or mono screen, Windows PocketPC software, mains charger, and PC synchronizing cradle.
- Elsafe SafeLink software, loaded on Compact Flash card, complete with set-up guide and manuals.
- Safelink infra-red linked portable printer, complete with batteries and alternative mains supply unit.
- Safelink safe connection cable for direct connection to any Elsafe in-room safe system.

### Handheld PC Options

Safelink software can be run on most recent model Windows PocketPC units, and we offer a range of optional alternatives, including Compaq 2100-series color screen and iPAQ models – call your local Elsafe sales office for latest details.

### Safelink Benefits on Earlier Safes

Elsafe SafeLink system is backward compatible with all Elsafe Classic and most earlier Elsafe safes. To connect the standard Safelink system with these safes, Elsafe supply an in-line active connector module specifically designed for each safe range.

The benefits of using Safelink to replace other safe management systems on earlier Elsafe safes include:

- You use only one system for all the safes in your hotel, simplifying training and centralizing security.
- You get a full-featured Safelink safe management system, with easy-to-understand menus to guide

Your local contact:

Elsafe International AS:

An ASSA ABLOY Group company

your staff all the way, and a whisper-silent IR-connected thermal printer that makes even the most advanced operations a breeze.

- You get Safelink's system set-up and password security, which are far simpler and more secure than any previous system. Four different password levels enable you to decide what operations can be performed by each staff member.
- You get the benefit of Safelink's unique Security Management Report – even for systems which don't have a safe audit trail! Your Safelink will maintain a

complete record of every security management event, which can be printed out or viewed on screen at any time. This gives you full details of up to 1,000 staff events, including emergency openings, for all the safes in your hotel, new and old, which staff member has used the Safelink, what operations have been performed, and even at what time!

ASSA ABLOY

NEW Elsafe SafeLink  
BACKWARD COMPATIBLE  
with all Elsafe Classic  
and most earlier safes

The ultimate security management tool for all  
Elsafe Classic and Infinity Collection safes

The simplest and  
most secure system for managing your safes  
– in the palm of your hand!

Our new SafeLink handheld system brings Infinity simplicity and security to hotel safe management.

Not just for your new Infinity Collection safes, but for almost every safe that Elsafe have ever made!

Now you can set up and service all the safes in your hotel using our state-of-the-art handheld unit and Windows Pocket PC software.

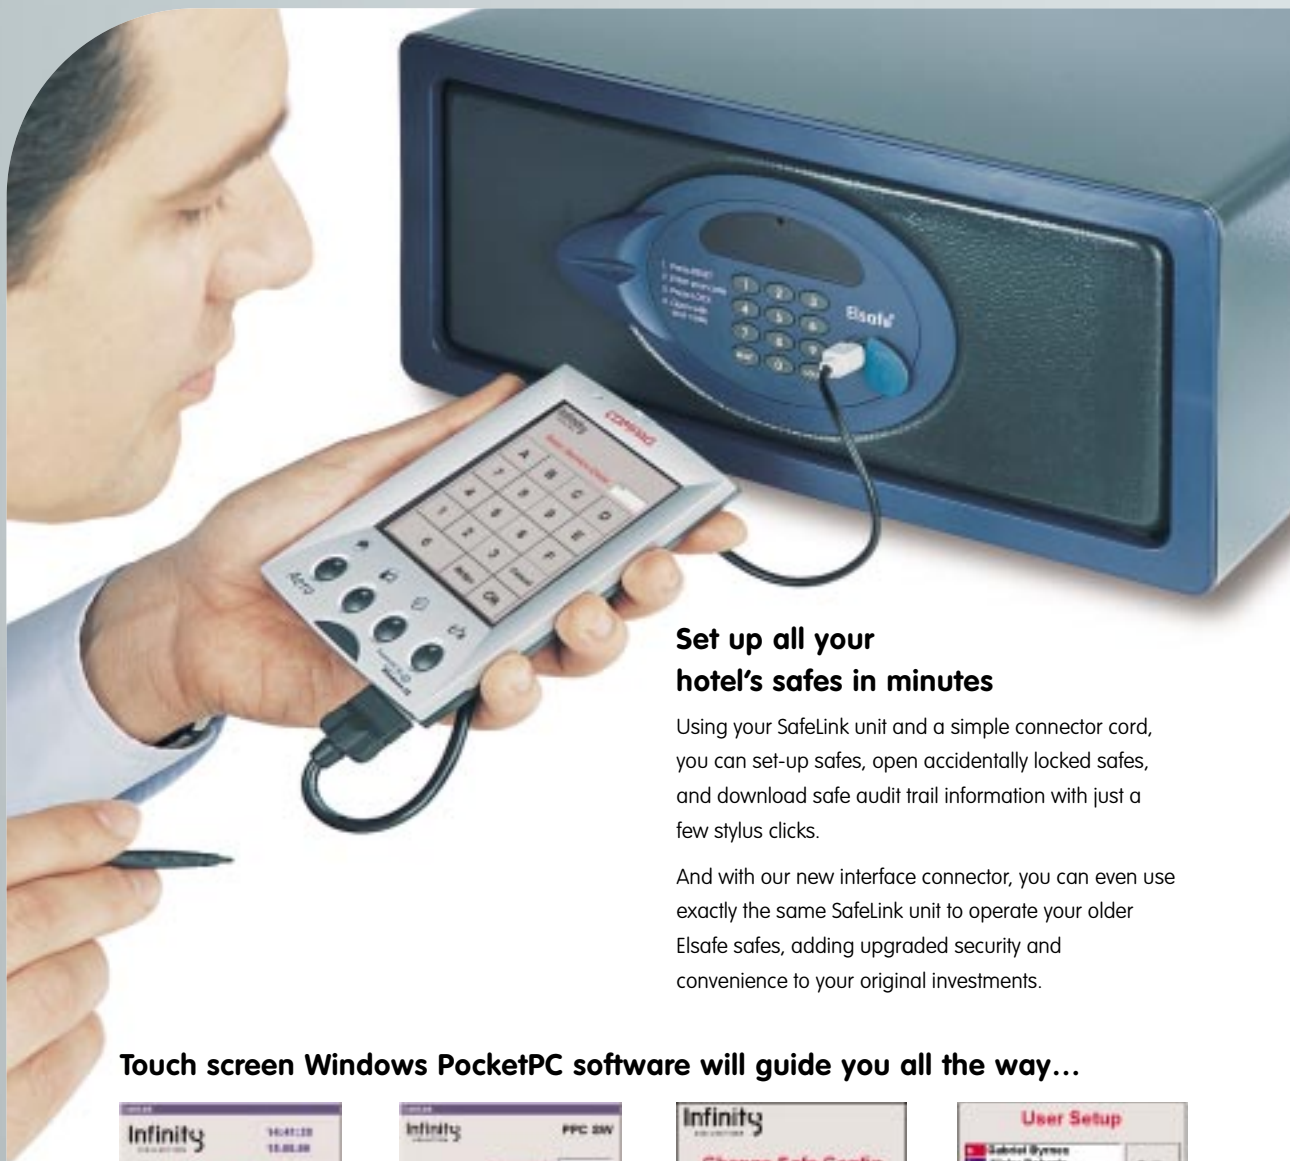

Our hand-held system is simplicity itself. Easy-to-understand icons and touch-screen software guide you all the way. In next to no time you'll be able to perform service openings, commission safes, print and read audit trails, and reprogram software options.

Just as important, SafeLink's security management is much more secure than the master key override, or service units found on other manufacturer's systems.

**NEW Elsafe SafeLink  
BACKWARD COMPATIBLE  
with all Elsafe Classic  
and most earlier safes**

No other system makes setting-up and managing your safes this easy...

And no other system provides this level of security management!

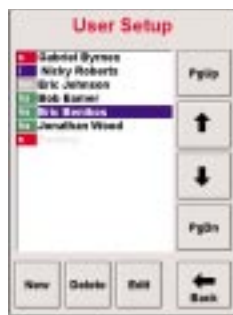

### Set up all your hotel's safes in minutes

Using your SafeLink unit and a simple connector cord, you can set-up safes, open accidentally locked safes, and download safe audit trail information with just a few stylus clicks.

And with our new interface connector, you can even use exactly the same SafeLink unit to operate your older Elsafe safes, adding upgraded security and convenience to your original investments.

### Touch screen Windows PocketPC software will guide you all the way...

Using industry standard Windows PocketPC-based software makes security management a breeze. All commands and options are simple to select using user-friendly, intuitive buttons on the hand-held unit's touch-screen.

Every member of staff gets a personal alphanumeric code during set-up. And whether your hotel has a few rooms or thousands, SafeLink's flexible design, up to

1,000 staff capacity, and four different user-levels will exactly match your needs.

All vital security and audit trail information is simply downloaded after daily use into the SafeLink's removable Flash-RAM card memory. This is then locked securely away, so there's no security risk even if you lose or damage the handheld unit.

### Full password protection with up to 1,000 named staff passwords

SafeLink has up to 1,000 alphanumeric passwords, far more than many other systems.

Every staff member who has opened a safe will appear on its audit trail, individually identified by name, and with up to 1,000 passwords, you'll never have to compromise security by sharing staff passwords.

These passwords are only displayed when each new user is created, and they can never be displayed or printed out.

### Print out details of up to 1,000 security management events

Every SafeLink operation is logged into its memory, and the last 1,000 events can be displayed or printed out at any time, just like the safe's audit trail.

This unique Security Management Report provides a complete record of every staff activity, unlike many other systems which only guard the safe at the 'front door' whilst the security management 'back door' is left wide open!

This report clearly lists every SafeLink operation, with the time and the identity of each user – a detailed SafeLink overview in seconds!

### Print out a detailed audit trail right in front of your guests

Using the SafeLink's infra-red linked printer, you can print out a 100 safe event audit trail immediately there's an incident.

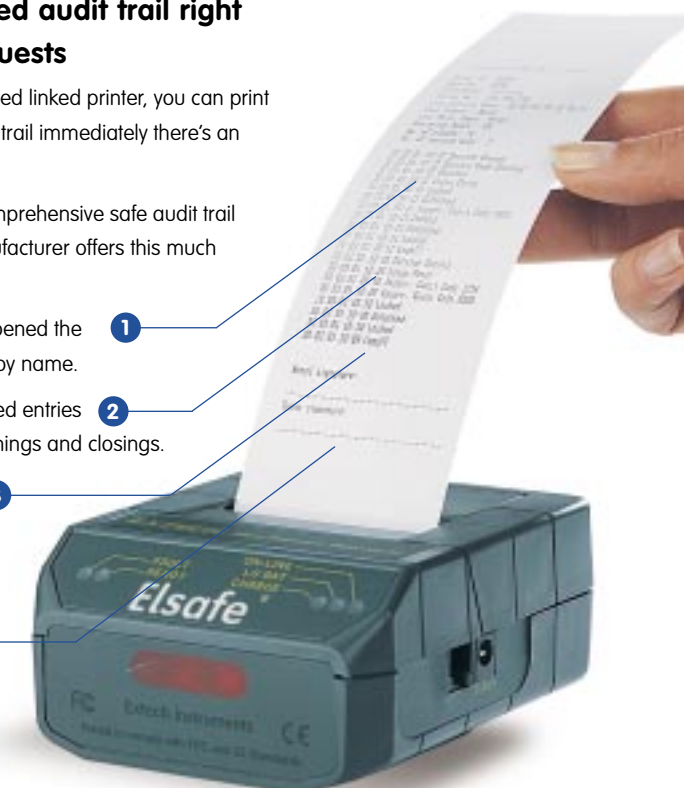

This report is the most comprehensive safe audit trail available – no other manufacturer offers this much detailed information.

All hotel staff who have opened the safe are clearly identified by name.

The report includes all failed entries as well as successful openings and closings.

There are many other details such as incorrect user codes, safe type and serial number.

There's even a section for the hotel representative and guest's signatures of approval.

### Instant on-the-spot security reporting that will protect the reputation of your hotel (and your staff)

If there is any suspicion of theft, your security staff can print out exactly who has opened the safe and when – vital evidence that could point to the likely suspect.

If the guest is mistaken, or if there is an attempted fraud, this detailed printout can provide indisputable evidence as to who was the last person to open the safe. This can dramatically reduce fraudulent liability claims, saving you time and money.

In fact, many hotels report annual savings of over 40% on their liability losses after installing Elsafe safes with audit trail capabilities.

- A complete security management solution
- Compatible with Infinity Collection, and most Elsafe Classics\* and earlier Elsafe safes\*
- Works with Windows PocketPC handheld units
- Fast and intuitive Windows PocketPC-based software
- Simple, high level password protection
- Detailed 'safe event' audit trail from all compatible safes
- 1,000-'SafeLink event' audit trail
- Compact Flash-RAM Card for instant backup and restore
- Audit trail displays on screen, or prints direct from infra-red printer
- Proven reliability and support from the world's leading in-room safe manufacturer

\* Requires interface connector module
